

INFORMATION FLOW CHARTS

0672

(September 1991)

Chart No. 1

Single Fire - ECC Assist:

At this first level of the information flow system, the unit ECC determines a need for assistance in handling information demands, so an information officer is assigned to assist.

Chart No. 2

Single Fire - IIC:

This chart depicts a fire situation when an Incident Information Center (IIC) has been set up to handle the information function. A Field Information Center (FIC) is usually set up at or near the fire scene, but because of communication and facilities needed, it may be set up some distance away.

Chart No. 3

Multiple Fires - IICs and Region ICC:

This chart depicts a multiple fire situation in one unit. The unit has established an IIC to handle a large fire. Other units within that region may have a similar situation. A Region ICC is appropriate to handle the regional information flow.

Chart No. 4

Multiple Fire/Multiple Regional Fire Situation:

This chart depicts a multiple major fire situation within a region; other regions may also have a similar situation occurring at the same time. The Information Coordination Center established in Sacramento (CALMAC) gathers timely information from regions and then provides up-to-date recap or summary information to all regions and cooperating agencies, the media, the Director, interested government leaders, and the public.
